

Facility Management Services

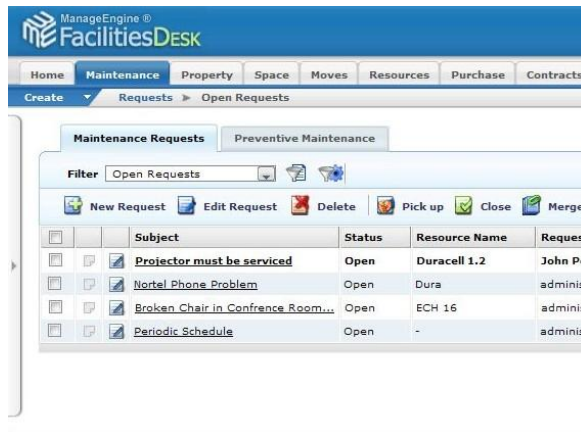

Featured Benefits

KNOW YOUR ASSETS

Many organizations often have a vague sense of the value and state of their capital assets and often rely heavily on auditors, contractors and experienced staff. With information systems organizations can instantly get reports on acquisition, maintenance, depreciation and replacement costs.

MAINTAIN STANDARDS

Asset inventories help organizations proactively track, plan and schedule regular maintenance. Timely maintenance eliminates wasteful expenditure, improves capital budgeting and planning and enforces enterprise-wide facility standards.

Organizations struggle with the complexity of engaging multiple vendors from interior design consultants, electrical engineers, plumbing and cleaning staff to preserve and upgrade their capital assets.

The ManageEngine web-based FacilitiesDesk centralizes and automates facility management and maintenance requests to reduce costs and extend the life of your physical assets.

Facilities Management System

Build an instantly accessible detailed integrated view of all facility assets including architectural drawings, condition assessment, space use, warranty status, service history and replacement costs to gain a detailed lifecycle view of your capital assets.

Conduct regular scheduled inspections to assess and report on the condition of facilities, equipment, layout, health and safety compliance, usability, and flexibility for future growth and expansion.

Facilities Maintenance System

Schedule preventative maintenance, track job order requests, equipment purchases, manage contractors and generate reports on overall capital costs and projected needs through this solution.

Precisely track the costs, condition and usage of capital assets and gain an insight into the productivity of maintenance workforce.
